darshbs047@gmail.com ◇ [linkedin.com/in/darshanbs-data-engineer/](https://www.linkedin.com/in/darshanbs-data-engineer/)

OBJECTIVE

Data Engineer with 2.9 years of experience building ETL pipelines on GCP using BigQuery, SQL, and Airflow. Experienced in data transformation, orchestration, data quality validation, and analytics support. Google ACE, Cloud Digital Leader, and Generative AI Leader certified.

EDUCATION

Bachelor of Engineering in Information Science, CMR Institute of Technology 2018 - 2022

SKILLS

Data Analysis	SQL, Python (ETL automation, data validation, scripting)
Databases	BigQuery, MySQL
ETL / Tools	IBM DataStage, Apache Airflow (Cloud Composer), dbt (basics), WinSCP
Cloud Platforms	Google Cloud Platform (GCP), Basic AWS exposure
Visualization / Reporting	Power BI, Excel (Pivot Tables, VLOOKUP, data cleaning)
Version Control	Git, GitHub, IBX Stash (Bitbucket/Stash)

EXPERIENCE

Data Engineer Dec 2022 - Sept 2025
Accenture Bengaluru, India

- Designed and maintained SQL-based ETL pipelines in BigQuery for incremental, monthly, and full-history data loads across healthcare and CRM analytics use cases.
- Built and managed Apache Airflow DAGs on Cloud Composer to orchestrate multi-step data workflows with scheduling, dependency handling, and error alerting.
- Developed staging and curated tables with deduplication, cleansing, and audit column logic to produce consistent, auditable datasets for reporting teams.
- Optimised BigQuery SQL through partitioning, clustering, and query refactoring — improved performance and reduced scan costs on high-frequency jobs.
- Managed source code, SQL scripts, and deployment workflows using IBX Stash, enabling version control, code reviews, and collaborative development across ETL team.

PROJECTS

Enterprise Data Quality Monitoring & Observability Platform.

- Built an end-to-end data quality monitoring platform using Python, BigQuery, Power BI, and IBM Scheduler with automated validation checks, audit logging, email alerts, and KPI dashboards.
- Implemented missing value, duplicate, schema validation, email format, and delayed load monitoring to simulate enterprise-grade data observability.

Healthcare ETL Pipeline Automation

- Designed and optimized BigQuery ETL pipelines for Independence Blue Cross (IBC), supporting incremental, monthly, and historical healthcare data loads.
- Built Airflow orchestration, data cleansing, customer matching, deduplication, and governance-aligned validation logic to improve data quality and audit ability.

CERTIFICATIONS

Google Associate Cloud Engineer — Google Cloud Digital Leader — Google Generative AI Leader
